

Use your own PCR reagents

## Automated processing of laboratory developed tests (LDTs)

Convenient consolidation of your LDTs on the AltoStar® Workflow

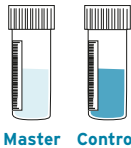

### Fully integrated workflow

Simple integration and automation with the AltoStar® Workflow\*

Automated nucleic acid extraction using AltoStar® Purification Kit 1.5

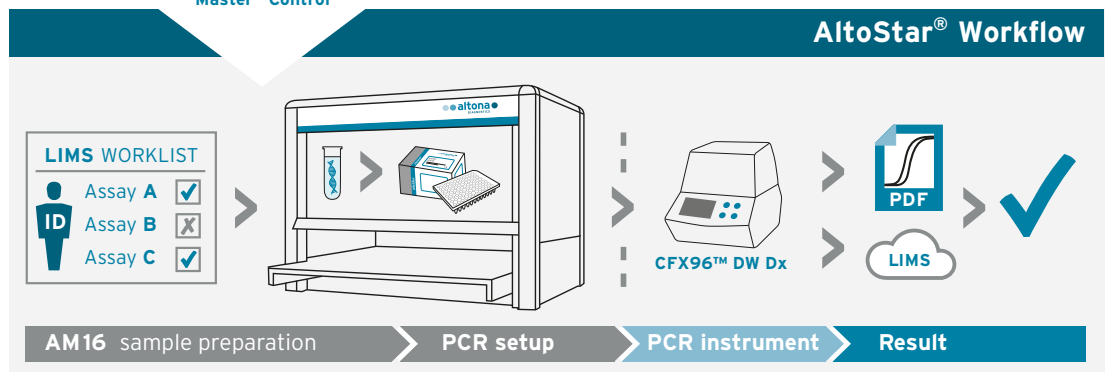

Implementation of LDT PCR protocols into AltoStar® Connect database

Traceability from sample to result

### LDT assay preparation

Barcoding of all required LDT reagents, including controls

### Flexibility & efficiency

One workflow for LDTs and CE marked assays

Run multiple tests from one sample

Combine different specimen types with different assays

Use up to 5 detection channels

Assay consolidation on the AltoStar® Workflow reduces hands-on-time, increases reliability and provides time savings for lab technicians.

We provide support for creating customized protocols to get full LDT functionality.

Contact your local sales representative to start your workflow personalization today.

\*Specific dead volume required in each tube. Compatibility with the CFX96™ DW cycler (Bio-Rad) required.

Use of LDTs for diagnostic procedures requires validation by the user.
